

American Energy Cargo Container Association

www.aecca.us

AECCA, the American Energy Cargo Container Association, is a Non-Profit organization based in Louisiana and formed exclusively for the purposes of promoting and disseminating information relating to the technical and other aspects of the offshore cargo container industry in the Gulf of Mexico and North America.

Its Mission Statement is to foster the eventual use of a uniform standard in the Gulf of Mexico and North America which will be globally recognized as a world class standard for the design, construction, and maintenance of cargo carrying units specific to the offshore energy business.

All current AECCA organization member companies are owned, based and operating in the GOM. A further goal of AECCA is the continuation of a well-balanced infrastructure that provides a competitive, yet profitable business climate for the Gulf of Mexico's economy, its companies, their employees and their employees' families throughout the region and specifically within the companies in the Oil and Gas Industry.

It is AECCA's belief that through the use of local suppliers with many years of local experience and expertise, and by maintaining safety and quality standards with the mutual cooperation and support between the companies that already have a vested and long-established interest in this goal that this may be achieved.

Further information about AECCA, the industry products and services its members provide, how to become a member and contact information can be found at www.aecca.us
